# Configuration of xend project

1. **Fork** project on **bitbucket**
2. **Clone** your forked project to local repository
3. Open it in Intellij idea
   - **Go to File -> New -> Project from Existing Sources…**

   - Go to folder with your project and click **Ok**
   - Choose **Import project from external model** and choose **sbt**
   - **Changes** or **Enable Auto-Import**
4. Adding **Run/Debug configurations**
   - Click on **Add Configurations…** on **Run** menu
   - You will see this window
   - Click **+** (Plus) and Choose **Play 2 App**
   - It will open configuration
   - Here it is needed to name this configuration somehow and to change values:
     Url To open: http://localhost:9100
     JVM Options:
     `-Xms512M -Xmx2048M -Xss1M -XX:+CMSClassUnloadingEnabled -Dsbt.jse.engineType=Node`
   - Click **Apply** and **Ok**
5. Run the project by clicking ▶ on **Run** menu
